## Natural Color Evaluation Lamps

The extra-deluxe fluorescent lamps are the world's best color rendering lamps. This is made possible by a color rendering index of $\mathrm{Ra}=99$ and special color rendering indices of R9 to R15 above 90. The color temperature of $5,000 \mathrm{~K}$ is closest to that of daylight and the brightness is a remarkable of 2,200 lumens.

In addition, the lamp life is long and there is minimal heat generation and radiation compared to conventional incandescent lamps. These lamps are most suitable for application where particularly high color rendition i impor-tant, such as printing plants, art galleries and studios, department stores and many others.

## Aquarium / Plant Lamps

## For Aquarium

Red and blue light components are balanced to provide the light required by both plants and tropical fish. The growth and health of water plants is thus maintained in the proper proportion. Application include for aquariums, growing water plants, and many others.

## For Plant

Most plants with green leaves must absorb sunlight, especially the red and blue components, in order to grow. "Plantlux \& quot" provides these important rays. The radiant energy is equal to twice that of a general colour fluorescent lamp of the same wattage. This is more than sufficient for plant growth. These lamps are useful for both botanists and general plant lovers as well. The lamp also shows plants more vivd. And use is also possible for decorative plants.
